

Thailand Wins 19 Awards

From ASEAN Energy Awards 2017

Becoming the Region's Energy Leader under Energy 4.0 Policy

ASEAN countries are all aware of the importance of energy efficiency and alternative energy development and form a collaboration to increase the region's competitiveness through energy development. The ASEAN community has set a target to increase the use of renewable energy from 12-13% at present to 23% by the year 2025.

Thailand is regarded as the region's leader of alternative energy development and energy efficiency with a 20-year strategic plan which consists of Energy Efficiency Plan (2015-2036) or EEP 2015 and Alternative Energy Development Plan (2015-2036) or AEDP 2015, contributing to Energy 4.0 policy.

One of the many activities organized to raise awareness of energy efficiency and alternative energy development among the public and private sectors is the annual Thailand Energy Awards held by the Department of Alternative Energy Development and Efficiency, Ministry of Energy. This year, winners from Thailand Energy Awards 2017 have been selected to compete in ASEAN Energy Awards 2017, recently held in September in the Philippines. These representatives from Thailand have won 19 awards, making Thailand the country with most winners in the competition. This remarkable success truly reflects Thailand's energy efficiency and development.
