PLN to have single power price for households

28 Indonesia's state-owned electricity company PLN will consider having a single commercial price for household customers as it plans to scrap the three different prices for household customers receiving electrical services of 900 VA, 1,300 VA and 2,200 VA.

The plan excludes customers who receive a subsidy from the government. This group of customers only receives 450 VA and 900 VA electrical services.

"PLN has agreed to change the groups of household customers. Currently there are groups of household customers who receive 450 VA, 900 VA, 1,300 VA and 2,200 VA of electrical power. Except those who receive a subsidy, household customers will only get 4,400 VA of electrical power," said Jonan.

"In the future, there will be no such groups. There will only be a single price for all household customers," he said as reported by tribunnews.com.

Jonan, however, declined to clarify what price would be set by PLN after the groups were scrapped. Such clarification is needed because currently, each group of customers has to pay different prices per kilowatt hour (kWh).
