**POWER SUPPLY****BGRIM BRINGS RAYONG  
POWER PLANT ONSTREAM**

**30** B Grimm Power Plc (BGRIM) last week started commercial operation of its latest power plant in Rayong, raising the company's combined generating portfolio to date to 1,912 megawatts.

The 133-MW combined cycle power plant, operated by subsidiary Amata B. Grimm Power (Rayong) 4 Ltd, known as ABPR 4, came on line on June 1, 2018 as stipulated under the 25-year power sale contract with the Electricity Generating Authority of Thailand (Egat).

"The coming on-stream of ABPR4 underscores our continued commitment to add new capacities to meet Thailand's growing energy need," said BGRIM President Preeyanart Soontornwata.

ABPR4 is the second of three combined cycle power houses BGRIM has been building at the Amata City Industrial Estate in Rayong, developed under the government's Small Power Producer (SPP) scheme, with a combined capacity of 399 MW.

These Rayong facilities will specifically ensure availability of efficient and reliable electricity supplies to the thriving industrial park.

BGRIM will later this year systematically put a series of power generation projects on stream to consolidate its overall portfolio to more than 2,000 MW.
